cloudficient

CLOUDFICIENT AT A GLANCE

Cloud migration overview

Platform, people and proof behind every Cloudficient migration

Cloudficient delivers enterprise-scale migrations through proprietary cloud-native technology and expert migration consultants. Because we develop, own, support, and deliver the platform used on every engagement, customers work directly with a single accountable team responsible for both the technology and the project's success.

- One company responsible for the migration platform, delivery, and project outcome
- Direct access to the experts who build, support, and deliver the platform
- Only migration vendor offering a no-cost, no-commitment Proof of Concept
- Maximum scale cloud-native migration technology reduces project timelines with minimal on-premises footprint
- Independently audited for SOC 2 Type II compliance (all five trust categories)
- 4.9/5 Gartner Peer Insights™ rating; the highest among comparable cloud migration vendors

Maximum scale cloud-native technology

Cloudficient's migration platform was purpose-built as a cloud-native solution to address the scale, complexity, and operational demands of modern enterprise migrations. Unlike traditional migration tools that rely heavily on on-premises infrastructure or distributed processing servers, Cloudficient performs migration processing within a highly scalable cloud architecture that dynamically allocates resources based on project demand.

This architecture enables organizations to migrate hundreds of thousands of mailboxes and petabytes of data while maintaining consistent performance, minimizing customer infrastructure requirements, and significantly reducing overall project timelines. The platform supports parallel processing across multiple migration workloads while continuously monitoring throughput, balancing resources, and automatically recovering from transient errors to maximize efficiency.

Workflow automation

Cloudficient's workflow-driven architecture automates and orchestrates the end-to-end migration lifecycle, providing a consistent and repeatable process across Exchange mailboxes, legacy email archives, active users, and inactive ("leaver") accounts.

Configurable workflow templates enable migration activities to align with operational requirements, regional deployment strategies, and business processes. All activities (e.g. end-user comms, M365 provisioning, migration execution, exception handling, etc.) are coordinated through a single workflow framework, reducing manual effort while improving visibility and project governance.

Security & governance

- ✓ Annually audited against SOC 2 Type II criteria
- ✓ Customer administrators retain exclusive control of privileged credentials
- ✓ Management portals segregated from migration content
- ✓ Migration content remains within the customer's security boundary
- ✓ Operational metadata is securely destroyed upon project completion

Proven delivery

Cloudficient has successfully delivered complex migrations for enterprise organizations across a broad range of industries. Our methodology, automation, and delivery expertise help customers maintain predictable schedules, consistent outcomes, and a seamless migration experience.

4.9/5

That commitment is reflected in Cloudficient's **4.9/5 Gartner Peer Insights™** rating - the highest among comparable cloud migration vendors.
